RPS/DPS 8100

High Accuracy Resonant Pressure Sensor

Since 1972, Druck has manufactured precision pressure sensors with a capability to meet critical applications in industrial, aerospace, oil and gas, and research environments. Today, Druck is part of GE Oil & Gas and has continually worked to develop and improve on the performance of our pressure sensors to meet our customers' requirements.

The RPS/DPS 8100 incorporates the exciting new TERPS technology. TERPS is a resonant silicon pressure sensor technology platform that provides an order of magnitude greater accuracy and stability than current pressure measurement technologies.

In addition to providing the performance and packaging improvements available with TERPS, the RPS/DPS 8100 product line takes advantage of best practices to offer a wide range of pressure and electrical connections to enable a level of customization for your specific requirements never before available in the performance class of this sensor.

The combination of the power of the TERPS technology and the quality, reliability and flexibility of the RPS/DPS 8100 Series offers a truly unique solution for high accuracy and high stability pressure measurement requirements.

Performance

There are two levels of performance specification: *Standard* and *Improved*

Specifications include combined effects of non-linearity, hysteresis, repeatability and temperature errors over the compensated temperature range and calibrated pressure range.

Accuracy Code	Precision
A1- Standard	0.02% FS
A2- Improved	0.01% FS

- For barometric ranges with improved accuracy, precision is ± 0.1 hPa max.
- For Frequency & Diode output the above accuracies are achievable by using a polynomial curve fit algorithm and coefficient data supplied with sensor.
- Sensors are calibrated against standards traceable to UKAS operating to better than 100 ppm.

Compensated Temperature Ranges:

There are four compensated temperature ranges available:

- -10 to +50°C
- -40 to +85°C
- -40 to +125°C (TTL and CAN bus only)
- -55 to +125°C (TTL and CAN bus only)

Temperature Effects

All temperature effects are included in the accuracy statement.

Long Term Stability

Standard: $\pm 0.02\%$ FS/annum max.

Improved: $\pm 0.01\%$ FS/annum max. ($\pm 0.005\%$ FS typical)

Note: Unless otherwise specified, specifications are at the reference conditions of 25°C (77°F) $\pm 5^\circ\text{C}$ ($\pm 9^\circ\text{F}$)

Orientation (g) Sensitivity

Less than 0.05 mbar/g
