PRODUCT DATA

4/6-ch. Input Module LAN-XI 51.2 kHz Type 3050

The core of the LAN-XI range of input modules, these modules are designed to cover as many sound and vibration measurement applications as possible.

Type 3050 comes in two basic variants, offering the choice between four and six high-precision input channels with an input range from DC to 51.2 kHz Type 3050 works equally well as a single-module system, or as part of a large LAN-XI measurement system — making it one of the most flexible data acquisitions modules on the market. In addition, interchangeable front panels give you the flexibility to use a wide range of transducers.

Uses and Features

Uses

- · General sound and vibration measurements
- Measurement front-end module for PULSE™ measurement and analysis software
- Front-end for PC-based Data Recorder Type 7708
- · Single-module measurements
- Multi-module measurements/ distributed system
- Stand-alone recording (no PC) using LAN-XI Notar™ software

Features

- 4 or 6 input channels
- DC to 51.2 kHz input range
- 131 ksample/s sampling rate
- Power for 200 V microphones
- Dyn-X technology
- REq-X technology
- Supports TEDS transducers
- Interchangeable front panels

One Cable Operation

You can use standard LAN cables for synchronous sampling between modules and system power, thanks to Power over Ethernet (PoE). This minimises the number of cables required and results in lower cost, less downtime, easier maintenance, and greater flexibility of installation.

Power over Ethernet

PoE is implemented according to IEEE 802.3af. PoE is wired Ethernet LAN technology that, with a suitable PoE LAN switch, allows the power needed for each module to be carried by screened shielded twisted pair (S/STP or S/FTP) CAT6 LAN cables rather than by separate power cables. This minimises the number of cables required and results in lower cost, less downtime, easier maintenance and greater installation flexibility. PoE switches, such as 10-port Gigabit Managed Switch with PTP and PoE (8 ports) UL-0265, and PoE Injectors, such as ZyXEL® PoE-12 Power over Ethernet (a single-port PoE injector), can be used.

Built for Field and Lab Use

The modules and the detachable front plates are cast in magnesium for maximum stability, light weight, and tough field use.

Interchangeable Front Panels

The modules allow front panels to be interchanged freely, with a variety of connectors for different transducers and applications. This results in fewer patch panels, less cable "spaghetti", fewer cable adaptors and faster system setup.

Independent Channels

The input channels on a module can be set up independently. You can set up the high-pass filters and input gain separately and attach different types of transducer to different channels.

IEEE 1451.4 Transducers

All input modules support TEDS transducers. This allows automatic front-end and analyzer setup based on TEDS information stored in the transducer, for example, sensitivity, serial number, manufacturer and calibration date. The individual frequency response of a transducer can be corrected for using PULSE's Transducer Response Equalisation, REq-X, to achieve higher accuracy over extended frequency ranges.

Overload

Constant Current Line Drive (CCLD) conditioning monitors the supply voltage used by CCLD-compatible transducers. Available CCLD transducers include:

- Accelerometers
- · Charge amplifiers
- · Microphone preamplifiers
- · Tacho probes

If conditioning errors, such as a broken cable, are detected, an error is indicated as an overload on the specific channel connector (using a ring-LED around the connector) and in the PC software.

Overload indications for input channels include (see Specifications for details):

- Signal overload with adjustable detection level
- CCLD overload: detection of cable break, short-circuit or CCLD transducer working point fault
- Microphone preamplifier overload: detection of microphone preamplifier current consumption too high or too low
- Common mode voltage overload relevant when input coupling is floating

Ground-loop Noise Suppression

The module's floating/grounded, differential input design and the fact that all external connections (LAN, power supply) are galvanically isolated in the module provide optimal ground-loop noise suppression.

Compliance with Standards

(CE-mark indicates compliance with: EMC Directive and Low Voltage Directive RCM mark indicates compliance with applicable ACMA technical standards – that is, for telecommunications, radio communications, EMC and EME China RoHS mark indicates compliance with administrative measures on the control of pollution caused by electronic information products according to the Ministry of Information Industries of the People's Republic of China WEEE mark indicates compliance with the EU WEEE Directive

EFFECT OF RADIATED AND CONDUCTED RF. MAGNETIC FIELD AND VIBRATION

Radiated RF: 80-2700 MHz, 80% AM 1 kHz, 10 V/m Conducted RF: 0.15-80 MHz, 80% AM 1 kHz, 10 V

Magnetic Field: 30 A/m, 50 Hz

Vibration: 5-500 Hz, 12.7 mm, 15 m/s²

Input measured with shorted input. All values are RMS. Conducted RF immunity on all channels is only guaranteed using an external connection from measuring ground to chassis terminal

Input	Radiated RF	Conducted RF	Magnetic Field	Vibration
Direct/CCLD	<250 μV	<300 μV	<4 μV	<80 μV
Preamplifier	<250 μV	<50 μV	<8 μV	<80 μV

Specifications - LAN Interface

CONNECTOR

RJ 45 (10baseT/100baseTX) connector complying with IEEE-802.3 100baseX

Types 3660-C and -D permit the use of a ruggedized RJ45 data connector (Neutrik NE8MC-1) to screw the cable to the frame

Types 3660-C and -D communicate at 1000 Mbits/s – shielded cables of type "CAT 5e" or better should be used

Individual modules communicate at 100 Mbits/s

All LAN connectors support MDIX, which means that cables may be "crossed" or not

For stand-alone modules, PoE is also supported (IEEE 802.3af). PoE requires screened shielded twisted pair (S/STP or S/FTP) CAT6 LAN cables

PROTOCOL

The following standard protocols are used:

- TCP
- DHCP (incl. Auto-IP)
- DNS (on top of UDP)
- IEEE 1588-2002 (on top of UDP)
- IP
- Ethernet

ACQUISITION PERFORMANCE

Each LAN-XI module generates data at almost 20 Mbit/s when measuring six channels at 51.2 kHz bandwidth. The modules are capable

of handling their own maximum traffic while the built-in switch in the frame's backplane has more than sufficient capacity. This means that bottlenecks can only occur outside these, for example in:

- · External switches
- PC

For convenience, it is possible to daisy-chain LAN-XI frames. However, it is not recommended to daisy-chain more than two frames. For larger configurations, a star configuration with a central switch is recommended. This must have a switch capacity well beyond $N \times 20$ Mbit/s, where N is the total number of modules

PTP PERFORMANCE

PTP Synchronisation (with 1 Gigabit LAN Switch):

Typical sample synchronisation better that 200 ns (approx. $\pm 0.07^{\circ}$ @ 1 kHz, $\pm 2^{\circ}$ @ 25.6 kHz) Tested with:

- Cisco® SG300-10MP, 10-port 10/100/1000 Managed Gigabit Switch with Maximum PoE (8 ports)
- Netgear® 5-port Gigabit Switch GS105

Better performance can be expected with a dedicated PTP switch:

UL-0265: 10-port Gigabit Managed Switch with PTPv2 and PoE (8 ports).

This is a dedicated PTP switch, preconfigured for optimal use with LAN-XI

Specifications – 4/6-ch. Input Module LAN-XI 51.2 kHz Type 3050

POWER REQUIREMENTS

DC Input: 10-32 V DC

Connector: LEMO coax., FFA.00.113, ground on shield

Power Consumption: DC Input: <15 W

Supply via PoE: According to IEEE 802.3af, Max. cable length 50 m

Temperature Protection:

Temperature sensor limits module's internal temperature to 80°C (176°F).

If temperature exceeds limit, system will automatically enable fan in I AN-XI frame or shut down module outside frame

Overload Detection		Signal Overload: Adjustable detection level ±1 V _{peak} to ±10 V _{peak} . Default level ±10 V _{peak} (CCLD mode ±7 V _{peak}) (31.6 V range: ±31.6 V) can be set in PULSE Transducer Database CCLD Overload: Detection of cable break or short-circuit + detection of CCLD transducer working point fault. Detection level: +2 V/20 V Microphone Preamplifier Overload: Detection of microphone preamplifier current consumption too high or too low. Detection level default 10 mA/1 mA Adjustable detection level 1 to 20 mA or 100 mA if disabled Common Mode Voltage Overload: Detection level: ±3.0 V				
Protection		If signal input level exceeds the measuring range significantly, the input will go into protection mode until the signal goes below the detection level again for at least 0.5 s. While in protection mode, the input is partly switched off and the input impedance is greatly increased. (The measured value will be strongly attenuated but still detectable) In DC mode –10 V _{peak} range, the detection limit is ±12 V. In all other measuring modes (except CCLD) the limit is ±50 V _{peak} including DC component or ±12 V _{peak} AC (In CCLD mode the limit is +50/–2 V _{peak} including DC component or ±12 V _{peak} AC) In the 31.6 V range, the limit is ±50 V _{peak}				

Ordering Information

Type 3050-A-060 6-ch. Input Module LAN-XI 51.2 kHz (Mic, CCLD, V) includes the following accessories:

- UA-2100-060: LAN-XI Detachable front panel with 6 BNC input connectors
- ZG-0426: Mains Adaptor (100 240 V)
- AO-1450: Shielded CAT 6 LAN Cable with RJ 45 (2 m)

Type 3050-A-040 4-ch. Input Module LAN-XI 51.2 kHz (Mic, CCLD, V) includes the following accessories:

- UA-2100-040: LAN-XI Detachable front panel with 4 BNC input connectors
- ZG-0426: Mains Adaptor (100 240 V)
- AO-1450: Shielded CAT 6 LAN Cable with RJ 45 (2 m)

OPTIONAL ACCESSORIES

AO-0090	7-pin LEMO to BNC male (1.2 m) for floating ground
AO-0091	7-pin LEMO to BNC female (1.2 m) for floating ground
AO 0526	4 pin Migratoch to 2 x PNC Coble

AO-0526 4-pin Microtech to 3 × BNC Cable

AO-0546 DC Power Cable, Car Utility Socket to 1 module AO-0548 DC Power Cable, Source to 4 modules

JJ-0081 BNC Adaptor, female to female

JJ-0152 BNC T-connector

JP-0145 BNC to 10-32 UNF Plug Adaptor

UA-1713 10 × 2 mm Hex Wrench (QX-1315) for front panel exchange

UL-0265 10-port Gigabit Managed Switch with PTP and

PoE (8 ports)

WB-1497 20 dB Attenuator
