COMPANY PROFILE

Meatest company was founded in 1991 and first designs date back another decade. With almost 40 years of experience in electrical metrology we make calibration and measurement equipment with lasting reliability, user-friendliness and high performance at the very top of our priorities.

Development is focused on robust and flexible solutions matching everyone's needs and making your work easier. Meatest developers account for full 25 % of Meatest staff. Utilizing decades of experience, sophisticated design, premium parts and ISO 9001:2015 framework they create unique instruments some of which don't have their counterpart anywhere in the world.

MADE TO LAST

Customer support, as a way of keeping operating costs as low as possible, is taken very seriously in Meatest. More than 50 representatives are at your service all over the world, helping you to find the best solution to your needs. Standard 2 year warranty can be extended to up to 5 years for all our instruments and general lifetime support is limited only by availability of external parts. Recalibration and maintenance is a matter of weeks, not months.

M140

M142

MULTIFUNCTION CALIBRATORS

HIGHLIGHTS

- AC/DC voltage/current to 1000V/30A
- Basic accuracy 10 ppm
- AC/DC power, energy, phase shift, resistance, capacitance, frequency, TC, RTD
- Build-in process multimeter
- GPIB and RS-232 as standard

DESCRIPTION

M140/142 series represents category of multifunction calibrators of electric quantities for general application. Various versions offer different range of electric functions, accuracies and user comfortability. Build-in multimeter enables complex testing and calibrating of sources and meters of electric quantities. Multimeters, scopes, power meters, etc. can be directly calibrated with the instrument in sourcing mode. In measuring mode, the calibrator can be used for testing of DC voltage/current sources, for temperature measurements and for measuring other non-electric quantities through external sensors. Simultaneous generation and measurement allows calibration, adjusting and testing of various types of regulators, panel-meters, converters, indicators etc. Either manual control from the front panel keyboard, or remote control via GPIB bus or via RS-232 is available.

Model	Voltage	Current	Power	Frequency	Impedance	TC	RTD	Basic accuracy
M142	1000 V	30 A	2.4 kW	20 MHz	1 GΩ, 100 µF	✓	✓	10 ppm
M142i	1000 V	30 A	—	—	—	✓	—	10 ppm
M140	1000 V	20 A	2.4 kW	20 MHz	50 MΩ, 50 µF	✓	✓	30 ppm
M140i	1000 V	20 A	—	—	—	✓	—	30 ppm

VERSIONS

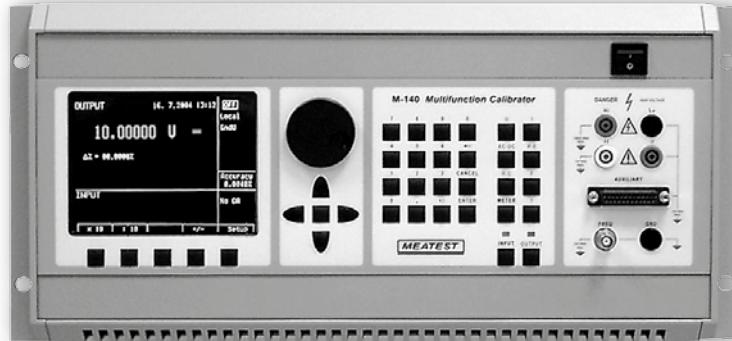

Full version with power, impedance, frequency and RTD

Base version with voltage, current and thermocouples

19" rack mount

OPTIONS AND ACCESORIES

Option 140-01 Cable Adapter

140-01 cable adapter is designed for easy connection of unit under test to M140/M142 multifunction calibrator. Basic part of the adapter is metal working pad with integrated voltage and current outputs with banana ends.

The adapter is connected to the calibrator via front panel AUXILIARY connector and main output terminals. On bottom side it contains mounted Pt100 temperature sensor through which ambient temperature is measured and value is applied for automatic compensation of cold junction temperature of simulated thermocouples.

Application:	multimeter, ammeter, voltmeter calibration
Dimensions:	230 mm x 75 mm x 290 mm
Weight:	1 kg
Connection:	safety Ø 4 mm banana

Option 140-41 Cable Adapter for M140

Cable adapter Option 140-41 is especially suitable for process and simultaneous calibrations. It enables to apply all input and output functions of the M140 multifunction Calibrator with output/input located on the AUXILIARY output connector on the calibrator front panel. Typical application is calibration and testing of such meters and transducers that need simulation of temperature sensors on the input side and measuring of output signal 20 mA/10V on the output side. When used in TESTER mode, additional relay contact of type PASS/FAIL is located on the adapter.

Application:	Strain gauge sensor measuring Voltage/Current/Resistance/Frequency measuring Simultaneous calibration and measurements
Dimensions/Weight:	105 mm x 50 mm x 170 mm/0.5 kg

Option 40 Cable Adapter

Cable adapter CANON 25-2 x Banana. With the adapter external source of signal can be measured with internal build-in multimeter. Option 40 enables measuring of DC voltage to 12 V, DC current to 25 mA, frequency to 15 kHz and temperature of TC temperature sensors.

Option 60 Cable Adapter

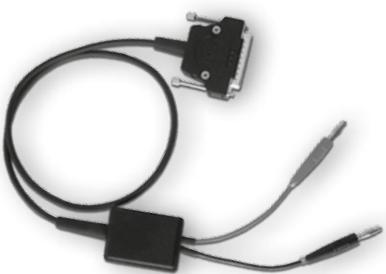

Cable adapter CANON 25-4 x Banana. Four terminal resistance measurement in build-in meter is accessible with the adapter. The option enables also direct measuring of ambient temperature via external RTD temperature sensors.

Option 70 Adapter

Cable adapter CANON 25-4 x Banana. Four-terminal output in resistance mode of M140 is accessible with the adapter. Four-terminal output is more accurate than front panel output, especially for low resistance values.

Option 80 Cable Adapter

Using the adapter temperature of external thermocouple sensors and mVDC to 2 V can be directly measured. M142 only.

Option 90 External Temperature Sensor

Ambient temperature can be measured with Pt100 sensor directly. M142 only.

Option 100 Terminal Adapter

Terminal adapter converts front panel terminal distance from 25 mm to ¾"

Option 140-50 Current Coil

25/50 turns current coil for calibration of clamp ammeters. Maximal range 1500 A.

M143
M143i

PORTABLE MULTIFUNCTION CALIBRATOR

HIGHLIGHTS

- AC/DC voltage/current up to 1000 V/20 A
- Basic accuracy 60 ppm, cold junction compensation
- Calibration of clamp meters up to 1000 A using 140-50 Current Coil
- Non-sinusoidal waveforms, resistance, frequency, TC, RTD
- Fixed standard resistors from 10 Ω to 100 MΩ
- GPIB and RS-232 interface
- Compact dimensions, overall weight 9 kg

DESCRIPTION

M143/143i Multifunction calibrator is cost saving solution for calibration of meters of electric quantities up to 1000 V and 20 A. It offers basic accuracy 0.01 % in DC voltage needed for calibration of 3½ and 4½ digit multimeters. Resistance function is covered by eight fix resistors in range from 10 Ω to 100 MΩ. Thanks to its small dimensions and low weight the calibrator can be applied easily for field calibrations.

M143's main application field are production lines of panel meters, multimeters, transducers, measuring amplifiers, thermometers, and calibration laboratories where the calibrator can be applied as source of standard value for calibrations, verifications and adjustments of units under test.

PRECISION DC CALIBRATOR

HIGHLIGHTS

- DC Voltage up to 100.0000 V, 20 ppm
- DC Current up to 50.0000 mA, 50 ppm
- Reference temperature range 13–33 °C
- Resistance, frequency, RTD
- TC simulation R, S, B, J, T, E, K, N, M, C, D, G2
- GPIB, USB, RS-232 and ethernet interface

DESCRIPTION

Precision DC calibrator M160 is a portable source of industrial process signals including DC voltage, DC current, thermocouple and RTD simulation, resistance and frequency. Unlike most of the other process calibrators, the M160 comes with exceptional 20 ppm accuracy over 20 °C-wide reference temperature range. All these features are combined with user friendly interface multi-interface remote control and robust design make this calibrator ideal for both calibration laboratories as well as industry professionals. Main parameters of both generated and measured signals are displayed on large LCD together with function-specific tooltip, providing auxiliary information like range, accuracy or load limit. Instrument can be connected to different ATE systems via RS232, USB, LAN or GPIB interface.

M160 is sophisticated instrument with its own recalibration procedure. The procedure enables to correct any deviation without mechanical adjustment.

DC Voltage source accuracy

Range/Resolution	Accuracy	Max. load
0.0000–300.0000 mV	20 ppm + 3 µV	50 mA
0.000000–3.000000 V	20 ppm + 20 µV	50 mA
0.00000–30.00000 V	20 ppm + 200 µV	50 mA
0.0000–100.0000 V	20 ppm + 1 mV	25 mA

DC Current source accuracy

Range/Resolution	Accuracy	Max. load
0.0000–25.0000 mA	50 ppm + 1 µA	100 V
0.0000–50.0000 mA	50 ppm + 1 µA	30 V

Frequency source accuracy

Range/Resolution	Accuracy
10.0000–200.0000 mHz	50 ppm
200.001–2000.000 mHz	50 ppm
2.00001–20.00000 Hz	50 ppm
20.0001–200.0000 Hz	50 ppm
200.01–2000.00 Hz	50 ppm
2.0001–4.0000 kHz	100 ppm
4.001–10.000 kHz	600 ppm
10.01–15.00 kHz	1500 ppm

Max. load 30V/50mA or internal pull up to +5V.

SPECIFICATION

Frequency meter accuracy

Summary range:	10 mHz to 100 kHz

Resolution:	0.01 °C
Accuracy:	0.1 – 0.8 °C, see user's manual for detailed specification
External RJ accuracy:	0.02 °C (option)

RTD Simulation (option)

RTD types:	Pt, Ni
Resolution:	0.01 °C
Accuracy:	0.1 – 0.2 °C, see user's manual for detailed specification

Real Resistance Decade (option)

Resistance range:	10 Ω–300 kΩ
Resolution:	from 0.0001 Ω
Accuracy:	0.02 %

GENERAL DATA

Reference temperature:	+13 °C ... +33 °C
Operating temperature:	+5 °C ... +45 °C
Storage temperature:	-10 °C ... +55 °C
Remote control:	RS232 interface (optionally USB, LAN, IEEE488)
Power supply:	115/230 Vac, 50/60 Hz, 60 W max
Dimensions:	W 390 mm, H 128 mm, D 310 mm
Weight:	5.5 kg

Accessory

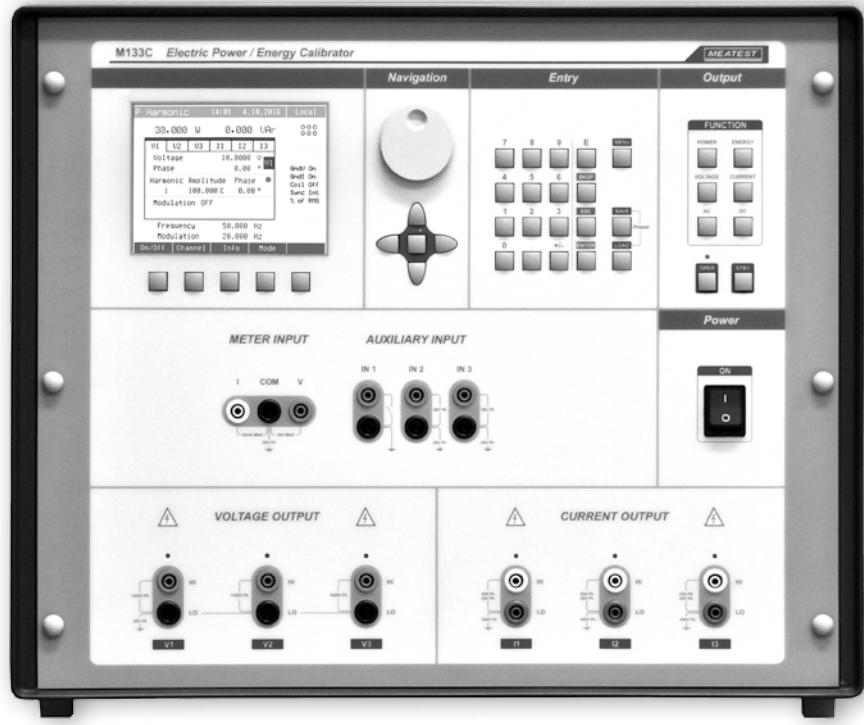

Option 160–60 – frequency measurement adapter
Option 160–70 – resistance measurement adapter
Option 91 – external RJ for thermocouples

Ordering codes

M133C

ELECTRIC POWER / ENERGY CALIBRATOR

HIGHLIGHTS

- Power quality and energy functions three and single phase version
- AC power up to 3x 18 kVA, DC up to 25.2 kW
- Phase accuracy 0.02°, frequency range 15–1000 Hz
- Calibration of clamp meters up to 2250 A
- Floating current outputs, up to 5 Vrms
- Built-in process multimeter
- GPIB, RS-232 and ethernet as standart

DESCRIPTION

M133C is electric AC/DC power and energy calibrator for calibration of power meters, power transducers, power quality analysers and generally all kinds of power measuring devices

Full version of M133C calibrator can generate four types of power distortion: harmonic up to 50 products, interharmonic up to 5 kHz, amplitude modulation using symmetrical sine or square wave envelope and finally dip/swell amplitude modulation using custom square wave envelope. All the parameters including distortion can be set independently for each phase.

M133C is more than just a sophisticated power source. Using built-in process multimeter, both transducer inputs and outputs can be handled by the M133C at the same time so you can calibrate it more easily, using no other calibration equipment. Floating current outputs can be connected directly with voltage outputs to allow for 3-wire power meter calibration. One calibrator, many applications – saving your time, space and costs.

SPECIFICATION

DC/AC voltage sinus

Voltage range:	1 Vdc to 280 Vdc, 1 Vac to 600 Vac
Resolution:	5½ dig.
Frequency range:	DC, 15 Hz to 1000 Hz. Synchronization to mains frequency or external signal is available.
Frequency accuracy:	0.005 %
Frequency resolution:	0.001 Hz, 0.01 Hz above 500 Hz
Distortion of output signal:	< 0.05 %

Range	% of value + % of range	Max. burden (mA)	% of value + % of range	Max. burden (mA)	% of value + % of range	Max. burden * (mA)
	DC	DC	15 – 40 Hz 70 – 1000 Hz	15 – 40 Hz 70 – 1000 Hz	40 – 70 Hz	40 – 70 Hz
1.0000 – 10.0000 V	0.015 + 0.01	100	0.02 + 0.01	100	0.015 + 0.01	100
10.0001 – 30.0000 V	0.015 + 0.01	200	0.02 + 0.01	200	0.015 + 0.01	200
30.001 – 70.000 V	0.015 + 0.01	200	0.02 + 0.01	200	0.015 + 0.01	300
70.001 – 140.000 V	0.015 + 0.01	200	0.02 + 0.01	200	0.015 + 0.01	300
140.001 – 280.000 V	0.015 + 0.01	150	0.02 + 0.01	150	0.015 + 0.01	200
280.001 – 600.000 V**	—	—	0.03 + 0.01	50	0.02 + 0.01	60

*Sum of all currents (three phases) for M133C (M133Ci) is limited to 400 mA **Only fundamental harmonic in range over 280 Vac, frequency range 20 – 1000 Hz

DC/AC current sinus

Current range:	0.005 A to 30 A
Resolution:	5½ dig.
Frequency range:	DC, 15 Hz to 1000 Hz.
Frequency accuracy:	0.005 %
Frequency resolution:	0.001 Hz, 0.01 Hz above 500 Hz
Distortion of output signal:	< 0.1 %

Range	% of value + % of range	Max. voltage (V)	% of value + % of range	% of value + % of range	Max. voltage (V)	Max. voltage (V)
	DC	DC	15 – 40 Hz 70 – 1000 Hz	40 – 70 Hz	15 – 400 Hz	400 – 1000 Hz

M151

CURRENT CALIBRATOR

HIGHLIGHTS

- AC/DC current 8 mA...120 A, 15-1000 Hz
- Total accuracy 275-400 ppm in all ranges
- Floating output up to 450 Vpk, compliance voltage 8 Vpk
- Calibration of clamp meters up to 3000 A
- Real and simulated transconductance amplifier
- GPIB and RS-232 come as standard

DESCRIPTION

Model M151 is a stable high current calibrator up to 120 A. Basic accuracy is 275 ppm. Instrument can be controlled via RS232 or GPIB interface. Calibrator can work in a simulated amplifier mode to increase current ranges of any multifunction calibrator. It is suitable for power meter's calibration because M151 can be synchronized with the input signal not only in amplitude but also in frequency and phase. Current terminals are isolated up to 450 Vpk against case (protective earth). M151 is a sophisticated instrument with its own recalibration procedure. The procedure enables to adjust any deviation directly from the front panel. Calibrator is designed for checking parameters of amp meters. With current coil it can be used for calibration of clamp meters.

M151 Specification (1 year accuracy, reference temperature)

M 550

IMPEDANCE CALIBRATOR

HIGHLIGHTS

- Calibration of LCR meters up to 1 MHz
- Resistance range 100 mΩ to 100 MΩ
- Capacitance range 10 pF to 100 µF
- Simulated inductance standards 10 µH to 10 H
- Best calibration uncertainty 0.02 % at 1 kHz
- GPIB and RS-232 come as standard
- Four pair coaxial terminal connection, four terminal connection, two terminal connection
- OPEN and SHORT reference functions

DESCRIPTION

Idea behind M550 Impedance Calibrator is to replace countless single value RCL standards with one calibrator that can switch between the standards like a CD changer in your car. The calibrator contains stable and temperature independent resistance standards, partial capacitance standards and partial inductance standards, simulated by RC T-type passive network. Calibration values of both complex parameters of partial standards are displayed on large LCD screen in preselected pairs of parameters as well as voltage, current and frequency readouts from built-in test signal meter. OPEN and SHORT reference positions are available as well.

The philosophy of M550 is based on remote control and automated calibration. For this reason, the calibrator is equipped with RS-232 and GPIB interfaces and of course, supported in CALIBER/WinQbase calibration software. Easy recalibration systems offers either full recalibration in all spot frequency points or simplified offset calibration.

SPECIFICATION

Modes:	4TP four pair terminal, 4 W four terminal 2 W two terminal
Output terminals:	4x BNC connectors for coaxial output (4TP) 4x banana terminal for non-coaxial output (2 W/4 W)
Frequency range:	20 Hz to 1 MHz
Reference correction positions:	SHORT, OPEN

Resistance

Range:	0.1 Ω to 100 MΩ (fix decimal values)
Deviation to nominal value:	0.10 % to 10 % depending on value and mode
Calibration uncertainty:	0.02 % to 1 % at 1 kHz depending on value and mode
Temperature coefficient:	2 to 25 ppm / °C

Capacitance

Range:	10 pF to 100 μF (fix decimal values)
Deviation to nominal value:	< 5 %
Calibration uncertainty:	0.05 % to 5 % at 1 kHz depending on value and mode
Temperature coefficient:	30 to 100 ppm / °C

Inductance

(simulated in 4TP mode)

Range:	10 μH to 10 H (fix decimal values)
Deviation to nominal value:	< 15 %
Calibration uncertainty:	0.1 % to 4 % at 1 kHz depending on value and mode
Temperature coefficient:	50 ppm / °C max.

Test level meter

Frequency range:	20 Hz to 100 kHz
Voltage range:	200 mV to 10 V rms
Test voltage accuracy:	2 to 5 %

GENERAL DATA

Interface:	RS232, GPIB
Operating temperature:	15 ... 30 °C
Storage temperature:	-10 ... +40 °C
Dimension:	W 450 mm, H 150 mm, D 430 mm
Net weight:	12 kg
Power line:	115/230 VAC, 50/60 Hz
Consumption:	45 VA

Automation of LCR meter calibration

M550 Impedance calibrator application combines precise and frequency independent partial standards of electric resistance, capacitance and inductance in one instrument. Both manual and remote control is available making the M550 an effective tool for manual or automatic adjustments, verifications and calibrations of various types of LCR meters. In 4TP mode the calibrator enables verification of LCR meter in frequency range up to 1 MHz. Calibration values either with or without test cable length correction are selectable.

Recalibration procedure

M550 calibration menu offers comfortable recalibration of calibration data. Two basic methods are implemented to make the recalibration easier. Full recalibration enables access to all stored complex calibration values of all partial standards in spot frequencies. Modification of frequency characteristics is fully accessible in this method. Offset recalibration simplifies the process of recalibration to modification of main parameter at 1 kHz only. Difference from the previous calibration value is automatically projected to all spot frequencies.

LF IMPEDANCE STANDARDS

HIGHLIGHTS

- Traceability of electric quantities, calibration of meters
- Low time constant, calibration uncertainty 0.005 %
- Three/four terminal or four pair terminal connection

DESCRIPTION

Resistance/Capacitance standards of series MTE are designed for calibration of ohmmeters, RCL meters, insulation testers calibration. They can be applied as a mean of traceability of electric resistance between primary and secondary laboratories. DC modification of the standards is equipped with 4 mm terminal socket. Resistance standards up to 1 MΩ are in four-terminal connection while standards over 10 MΩ have two terminal connection with additional insulation washer and with grounding terminal connected to the housing. AC resistance versions and capacitance/inductance standards are delivered with four BNC connectors enabling application in three-terminal, four-terminal, four-pair terminal configuration. As a part of MTE set for AC applications the reference positions OPEN and SHORT terminals can be delivered. Both components serve typically for zero calibration of RCL meters. Other type of connectors can be installed on request. Other nominal values can be delivered on request.

Inductance standards

Connection	Four pair terminal
Type of terminals	BNC coaxial connectors
Frequency range	100 Hz – 20 kHz

Model	Nominal value	Accuracy	1 kHz calibration uncertainty	Temperature coefficient	Min. quality factor for f=1 kHz	Type
LP - 100m *	100 mH	0.5 %	0.05 %	50 ppm/°C	≥ 3 ***	T-network
LP - 1 **	1 H	0.5 %	0.05 %	50 ppm/°C	≥ 3	T-network
LP - 10	10 H	0.5 %	0.05 %	50 ppm/°C	≥ 10	T-network
LP - 100	100 H	0.5 %	0.05 %	50 ppm/°C	≥ 10	T-network
LP - 1000	1000 H	0.5 %	0.05 %	50 ppm/°C	≥ 10	T-network

T network is composed from two resistors and one capacitor. The network can simulate inductance parameter L21 with Q factor over 3 in recommended frequency area. The standard can be applied for calibration of those RCL meters which measure test current in Low input terminal. The standard cannot be applied for calibration of classic transformer bridges.

*Applicable frequency range from 10 to 20 kHz; **Applicable frequency range from 1 kHz to 20 kHz; ***Q factor for frequency 10 kHz

Resistance standards

Connection	4-terminals or 4 pair-terminals, 3-terminals (above 10 MΩ)

M 530

HF RESISTANCE STANDARDS

HIGHLIGHTS

- Resistance range 10 Ω to 1000 Ω
- Very low frequency dependency
- Applicable frequency range to 100 MHz
- Calibration of wide frequency range
- LCR meters

DESCRIPTION

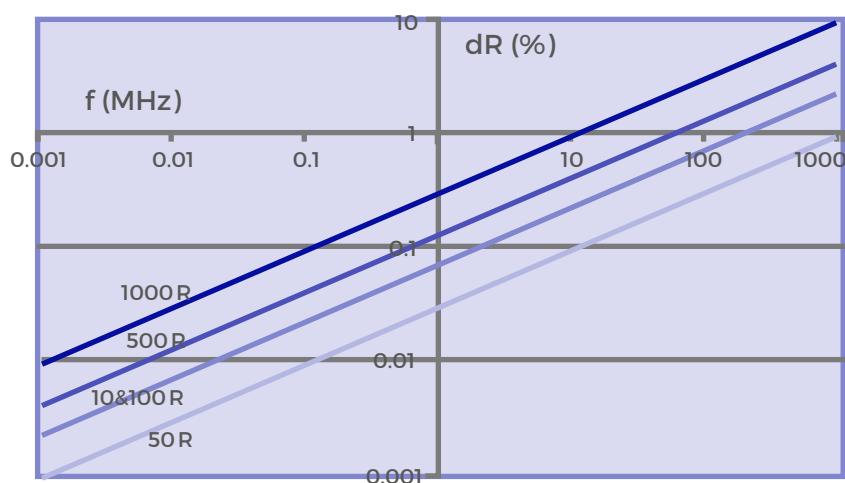

The resistance standard set is designed especially for calibration of LCR meters in frequency range from DC to 100 MHz. The standards are equipped with four coaxial BNC connectors. Wide frequency range is achieved by applied HF design using strip line technology. Four-pair terminal connection with 22 mm distance between them enables direct connection to the UUTs without need to apply test leads.

The standards are available with nominal value 10, 50, 100, 500, 1000 Ω in 1% tolerance. Reference positions OPEN and SHORT for easy "zero" compensation are available as well.

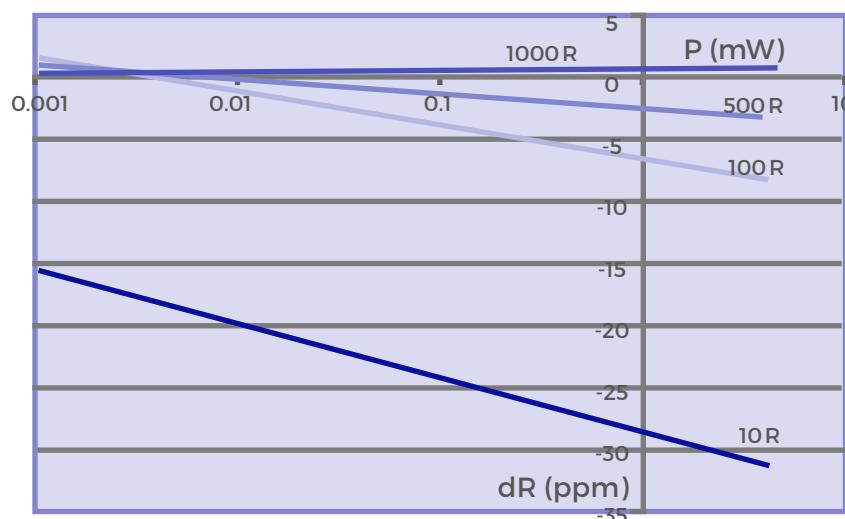

Technical specification

Model	Nominal value	Maximal frequency for 0.1% deviation	Maximal frequency for 1% deviation	Time constant	Temperature coefficient	Maximal test current
M530-10R	10 Ω	2 MHz	200 MHz	< 2.10-10 s	< 1 ppm/°C	40 mA
M530-50R	50 Ω	10 MHz	> 500 MHz	< 2.10-10 s	< 1 ppm/°C	20 mA

M530-1000R	1000 Ω	0.1 MHz	10 MHz	< 2.10-10 s	< 25 ppm/°C	4 mA
OPEN	—	2 MHz	200 MHz	—	—	—
SHORT	0 Ω	2 MHz	200 MHz	—	—	100 mA

Frequency dependency

Load dependency

GENERAL DATA

Self-inductance:	< 0.08 μH
Connection:	4 x BNC male connector
Distance between connectors:	22 mm
Dimensions:	105 x 34 x 50 mm (including connectors)
Housing:	aluminum
Range of working temperatures:	15–30 °C

APPLICATION

Calibration of LCR meters

The standards are equipped with BNC connectors with the same spacing as input terminals of most frequently used LCR meters. Calibration in this way excludes the most significant uncertainties related to cables.

M 63x

M 64x

REAL-RESISTANCE DECades

HIGHLIGHTS

- Real resistors switched by relays
- Ranges as wide as 14 decades, resolution from $1 \mu\Omega$
- No parasitic resistances
- 20 ppm accuracy / 5 W load capacity
- Six different languages, custom units

DESCRIPTION

The M6xx series programmable resistance decades and RTD simulators offer an exceptional accuracy, resolution and stability of real resistance simulation. Both M63x decades contain stable foil resistors with low temperature coefficient switched by low thermal voltage relays. Built-in software has also a function of RTD temperature sensor simulation with parameters according to IEC (DIN) or US standards and temperature setting in degree of Celsius or Fahrenheit. Instrument can be controlled via RS232, USB, LAN or GPIB interface.

M6xx series programmable decades are sophisticated instruments with their own recalibration procedures. The procedure lets the user to correct any deviation in resistance without any mechanical adjusting.

Model	Usage	Range	Resolution	Max. load	Interfaces (RS232 std.)	Accuracy
M632	Resistance Decade	1 Ω – 1.2 MΩ	10 $\mu\Omega$	0.25 W	USB, GPIB, LAN	0.003 %

M191

INSULATION TESTER CALIBRATOR

HIGHLIGHTS

- Resistance range 10 kΩ to 1 TΩ, voltage up to 10 kV
- Based on Real-Resistance Decade technology
- High voltage capacitance, dielectric parameter testing
- Test voltage and current indication
- Short and timer functions
- GPIB and RS-232 come as standard

DESCRIPTION

M191 Insulation Tester Calibrator is based on 1 TΩ programmable high resistance decade with 10 kV DC compliance, coupled with test voltage meter. This setup allows for calibration of UUT's test voltage, short current verification, timer function verification and calibration of dielectric parameters measurement including polarization index (PI), dielectric absorption ratio (DAR) and polarization ratio (PR).

M191 is designed for thorough calibration of insulation testers, megaohmmeters, HIPOT testers or any other DC high resistance meters and safety testers with test voltage up to 10 kV. With M191's palette of functions you'll no longer need multiple instruments and complex setups for high resistance applications.

SPECIFICATION

High voltage resistance

Resistance range:	10.00 kΩ to 1000.0 GΩ
Test voltage range:	10 000 VDC + 5 % over range
Hot switching:	up to 3000 VDC

SHORT function (short current testing)

Current range:	0.000 – 5.000 mA DC
Input resistance:	2700 Ω nom.

High voltage capacitance

Range of capacitance:	10, 50, 100 nF fix values
Tolerance:	±10 %
Calibration value uncertainty:	0.3 % + 200 pF
Max. test voltage:	5 000 VDC + 5 % over range

Accuracy in grounded mode (G) and floating mode (F):

Resistance range	Accuracy in G mode*	Accuracy in F mode*	Maximum DC test voltage***	Typical voltage dependency	Test voltage accuracy	Test current range	Test current accuracy

HIGH RESISTANCE DECADE

HIGHLIGHTS

- Resistance range **10.00 kΩ – 100.0 GΩ**
- Resistance accuracy **0.1 to 1 %**
- Operating voltage to **6 kVDC**
- Short current **mA – meter**
- Hot switching
- Timing function
- RS232 (optionally USB, IEEE488, Ethernet)

DESCRIPTION

M194 High Resistance Decade is based on M6xx Series Real-Resistance Programmable Decades, providing cutting-edge performance, user-friendly calibration of resistance ranges as well as test meter ranges, timer and short current testing of UUTs. Main feature of M194 is adjustable high resistance decade in continuous range from 10 kΩ to 100 GΩ with 4 digit resolution. Designed for maximum operating voltages of up to 6 kVDC this decade is great for calibration of meggers, megaohmmeters and insulation testers. Accuracy from 0.1%.

Full remote control and automated calibration support is a standard for all Meatest instruments. On top of that, M194 comes with 4 interfaces (RS232, USB, LAN and GPIB) to match your system more easily.

Accuracy & limits

M109R

HIGH RESISTANCE DECADE

HIGHLIGHTS

- Calibration of megaohmmeters
- 12 GΩ range, resolution 1 MΩ
- Maximum test voltage 5 kV
- Floating Lo terminal
- Battery backup
- RS-232 as standard

DESCRIPTION

High resistance decade box is designed for calibrating of insulation meters and megaohmmeters. It is suitable for calibration laboratories and service centres, where can be used also for testing or setting of high resistance meters. High voltage relays with extremely high insulation resistance are used for switching of resistance components.

M109R is equipped with indication of maximum voltage limit. Instrument is supplied from accumulator or power line adapter. Control is possible manually or remotely via serial interface RS-232.

GENERAL DATA

Range of resistance:	1 MΩ - 12.221 GΩ
Maximum voltage:	5kV DC between terminals H-L, H-GND, L-GND
Connection:	2W, 3W (GUARD)
Type of terminals:	high voltage terminals with ERTALYTE isolation
Remote control:	RS-232
Supply:	internal accumulator, power line supply adapter 15 V (100-240 V/50-60 Hz)
Temperature range:	23 °C ± 5 °C
Relative humidity:	10 - 50 %
Dimensions:	364 mm x 111 mm x 316 mm
Weight:	4 kg

Accuracy

Decade	Nominal value accuracy	Voltage coefficient	Temperature coefficient	Maximum voltage
1 MΩ–11 MΩ	0.1 %	1 ppm/V	< 100 ppm/°C	1000 VDC
10 MΩ–110 MΩ	0.2 %	1 ppm/V	< 100 ppm/°C	2500 VDC
100 MΩ–1.1 GΩ	0.5 %	2 ppm/V	< 100 ppm/°C	5000 VDC
1 GΩ–12 GΩ	1.0 %	2 ppm/V	< 100 ppm/°C	5000 VDC

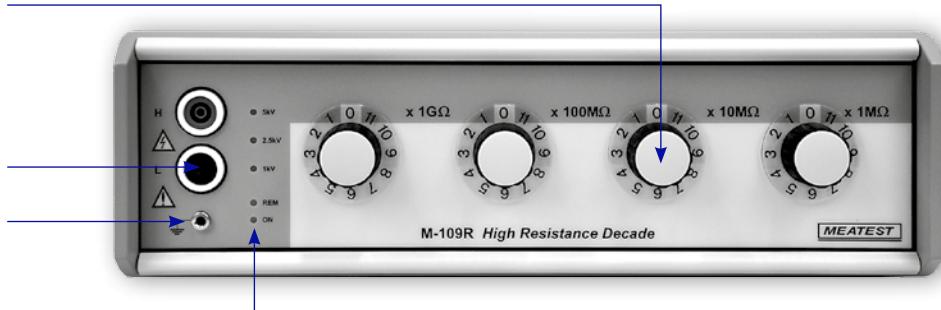

APPLICATION

Calibration and verification of resistance meters with test voltage up to 5 kVDC – insulation testers, safety testers, megohmmeters, ...

FRONT PANEL

Mechanical rotary knobs

Floating terminals,
protected up to 5 kV

GND terminal (protection earth)

LED indication (max. allowed
voltage, remote control, on/off)

M 525

CAPACITANCE DECADE

HIGHLIGHTS

- Designed for capacitance meter calibration
- Capacitance range 100 pF-100 µF based on real-resistance decade technology
- Capacitance accuracy 0.25 % open correction
- Operating voltage 50 V
- GPIB, USB, RS-232 and ethernet interfaces

DESCRIPTION

Model M525 is a precise capacitance decade box with range from 100 pF to 100 µF. Basic accuracy is 0.25 %. Best resolution on the lowest range is 1 pF. Capacitors are switched using special relays designed for high currents. Comfortable user interface offers direct setting of capacity value, OPEN correction, grounding L terminal, user conversion curves setting and others. Decade can be remotely controlled by a computer using standard RS232 interface. LAN, USB and GPIB interfaces are optional.

M525 is equipped with an internal calibration menu that allows correcting any deviation of capacity value without opening the instrument. Decade is designed for checking multimeters and simple RLC meter. It is suitable also for repair, adjustment and calibration of measuring instruments.

SPECIFICATION

Range	Accuracy		Loss coefficient		Temperature coefficient	
	1 kHz	1 kHz	40 Hz - 1 kHz	10 Hz - 1 kHz	ppm / °C	
0.100 nF - 10.000 nF	0.25 % ± 3pF	< 0.05	0.5 % ± 3pF	< 0.05	< 270	
10.001 nF - 100.00 nF	0.25 %	< 0.005	0.5 %	< 0.005	< 270	
100.01 nF - 1.0000 µF	0.25 %	< 0.005	0.5 %	< 0.005	< 270	
1.0001 µF - 10.000 µF	0.25 %	< 0.05	0.5 %	< 0.05	< 270	
10.001 µF - 100.00 µF	0.25 %*	< 0.2 *	0.5 %	< 0.2 **	< 270	

Note:

* For frequency 100 Hz

** For frequency range 40-100 Hz

Capacity value is defined in the output terminals level.

Correction Open OFF - capacity value is defined relative to the OPEN value.

Correction Open ON - capacity value is defined absolutely.

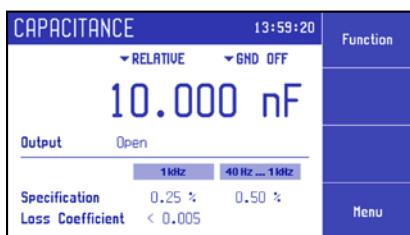

GENERAL DATA

Maximal voltage:	50 Vpk
Temperature coefficient:	< 270 ppm/ °C
Reaction time:	< 200 ms
Terminals:	gold plated terminals 4 mm
Remote control:	RS232 interface (optionally USB, LAN, IEEE488)
Power supply:	85-260 VAC, 45-65 Hz
Reference temperatures:	+21 °C ... +25 °C
Working temperatures:	+5 °C ... +40 °C
Storage temperatures:	-10 °C ... +50 °C
Dimensions:	W 390 mm, H 128 mm, D 310 mm
Weight:	4 kg

Calibration

AUTOMATED CALIBRATION SOFTWARE

HIGHLIGHTS

- Saves times, costs and prevents human errors
- Instrument control via RS232, GPIB, USB, RS485 or VISA ethernet
- Camera readout module
- Fully flexible, works with all kinds of instruments, any brand
- Uncertainty calculation according to metrology standards (EA 4/02)
- Easy creation of new procedures using Procedure wizzard
- Up to 20 instruments per calibration point
- Runs on all Windows versions from 2000 to Windows 10
- EN, DE, RU, HU, SK an CZ language

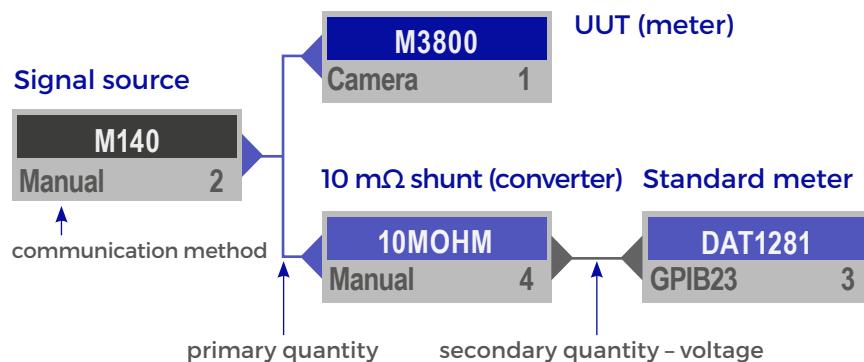

DESCRIPTION

Caliber software is designed for automated calibration and reporting. It does the same thing as you would with Excel spreadsheet and manual calibration but much faster, cheaper, doing no errors and not bothering you even a minute.

Caliber controls calibration instruments using RS232, GPIB or VISA interface where possible. Instruments with no such interfaces can be read by optical readout module CamOCR or operated manually altogether.

Instruments scheme

Program uses special symbols for displaying different types of instruments in the "Instruments scheme" diagram. Up to 20 instruments can be used in one calibration point. Diagram below shows calibration of current function with standard meter measuring voltage at current shunt.

Caliber output

Registration number							page 3
Calibration certificate No.:							
Measured values:							
Function	Range	Standard	UUT	Deviation/%spec	Allowed	Uncertainty	
VDC-2W1	200 mV	20.0 mV	20.0 mV	10 mV 5%	200 mV	62 mV ok	
VDC-2W1	200 mV	180.0 mV	179.8 mV	-200 mV -2%	999 mV	66 mV ok	
VDC-2W1	200 mV	-180.0 mV	-180.2 mV	-200 mV -2%	1001 mV	66 mV ok	
VDC-2W1	2 V	0.200 V	0.200 V	0.30 mV 15%	2.00 eV	0.58 mV ok	
VDC-2W1	2 V	1.000 V	1.000 V	0.10 mV 11%	11.00 eV	0.58 mV ok	
VDC-2W1	2 V	-1.000 V	-1.000 V	-0.10 mV 0%	10.00 eV	0.58 mV ok	
VDC-2W1	20 V	2.00 V	2.00 V	0.10 mV 10%	20.0 eV	5.8 mV ok	
VDC-2W1	20 V	10.00 V	10.30 V	300.0 mV 488%	61.5 eV	5.8 mV ok	

Uncertainty of measurements: Extended uncertainty is defined by coefficient k=2.

Output of the CALIBER program represents a physically performed calibration with a calibration record – a table with measured and evaluated data (the test report).

MAIN WINDOW

Camera - Optional camera module for digital display scanning

User prompt window

Clear instruction for calibration staff

Status line

Instruments scheme

Instruments used in selected calibration point and their configuration

Procedure window

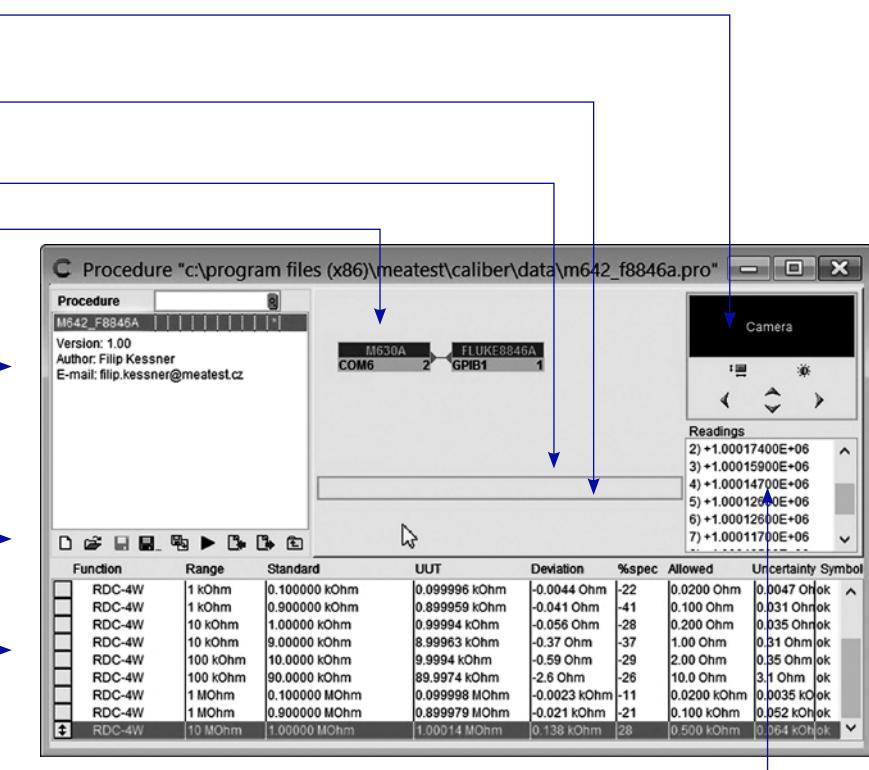

Functions, Ranges, Points, Active terminals connection, Exceptions

Direct keys

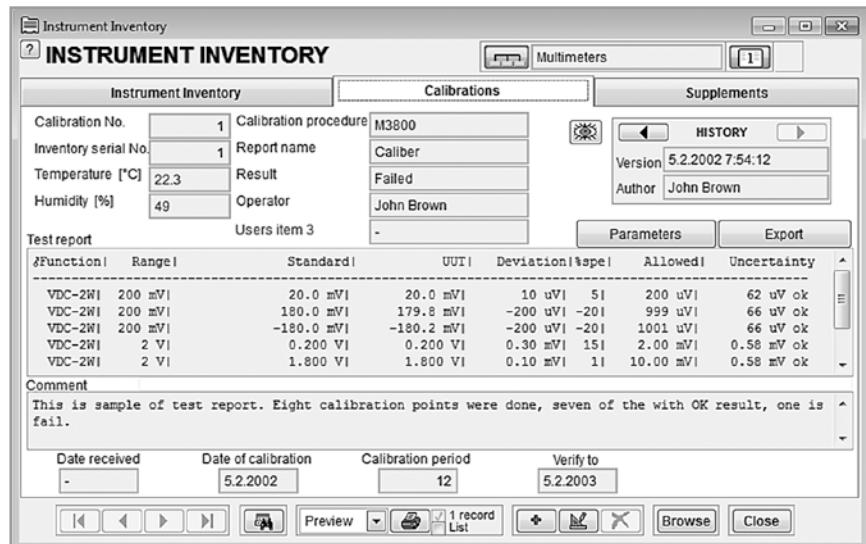

New/Open /Save, Reload Start, Calibration, Import/Export

Test report - Measured and evaluated values (measured deviation, maximum allowed deviation, measurement uncertainty...)

Readings - Instrument readouts

WinQbase-Caliber

To keep things organized, you can employ database software WinQbase to work in tandem with Caliber. WinQbase is designed specifically for calibration labs to keep detailed information of both standard units and UUTs, such as instrument serial number, inventory data, owner identification, calibration dates and methods, etc.

Calibrations done by Caliber software are automatically stored in WinQbase when online or synchronized later when you're out on site without connection to the database. Database is automatically backed up, uses password protected user accounts and logs every operation within the system so you can't ever lose your calibration data.

CamOCR (optional Camera module)

CamOcr camera module extends possibilities of MEATEST automatic calibration software Caliber. CamOcr is designed for scanning of 7 segment digital displays.

Instruments (UUT) without remote control interface can be "connected" using CamOcr to the computer. Instrument's display is scanned by digital video camera. It is very easy to do repeated measurements and calculate uncertainty type "A" for every calibration point.

CERTIFIED BUSINESS

Our quality management system is certified to ISO 9001:2015 under UKAS certification rules. All new instruments are tested and calibrated with possibility of ISO 17025 certified calibration.

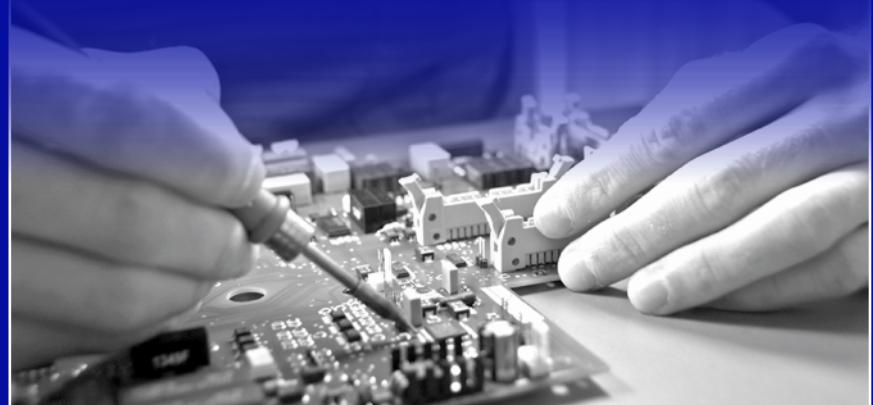

INNOVATION FOCUS

Continuous development is taken very seriously in Meatest. That's why developers account for more than a quarter of all Meatest workforce.

FLEXIBLE SOLUTIONS

Nothing on market to match your requirements? Or just missing critical feature in our instruments? Share with us and together we'll surely come up with solution.

INSTRUMENTS FOR PEOPLE

Our representatives are at your service all over the world. Would you like to consult your solution with us? Get a quote? Training? Service? Calibration? Let us know.
